ÍNDICE DE FIGURAS

Figure 1: General description of study zone: (a) reference map of Chile; (b) longitudinal variation of mean annual precipitation (black dots) and elevation (brown area) for latitudes displayed as black lines in next panels; (c) elevation map; (d) spatial distribution of CR2METV2.0 (d) precipitation, (e) maximum and (f) minimum temperature for period 1979-2018.....	7
Figure 2: Schematics of the methodology: (i) spatial and temporal data aggregation (blue and red lines represents observed and modeled time series for an arbitrary pixel); (ii) diagnostics prior to the downscaling process; (iii) application of Quantile Delta Mapping (QDM) and Multivariate Bias-Correction (MBCn); and (iv) diagnostics after downscaling process).....	9
Figure 3: Illustration of our ranking methodology. First, each metric is calculated for all variables and GCMs: as an example, the panel (a) shows rcycle values obtained with for an arbitrary model. Then, empirical CDF is obtained from the results of (a), and the area between the CDF and the desire value of the metric is calculated, represented with the gray area in panel (b). The ranking is calculated based on this area (smaller area is associated with better performance), and this process is repeated for all metrics (panel c). Then (d) the ranking per variable is calculated by averaging the rankings calculated for each metric. Finally, (e) the total ranking is obtained as the mean of ranks per variable. In the ranking, blue (red) dots represent the best (worst) models, and green triangles represent the best model.	11
Figure 4: Ranking pre-downscaling for each resolution: (a) overall ranking per model and (b) overall ranking (first row) and ranking per metric (last four rows) calculated for precipitation. Colors and numbers represent the position of the ranking for a given resolution, GCM and metric.....	13
Figure 5: (a) Overall ranking per model prior (Raw) and posterior (QDM and MBCn) downscaling process. (b) Overall ranking (first row) and ranking per metric (last four rows) calculated for minimum temperature, prior (Raw) and posterior to downscaling process (QDM and MBCn). Colors and numbers represent the position of the ranking for a given resolution, GCM and metric.....	14
Figure 6: (a) Observed climatological mean of annual precipitation at a 0.25° and for (b) raw GCMs and (c) statistically downscaled GCM output using the MBCn method. Results are displayed for three models sorted by their position in the raw GCM ranking: EC.Earth3 (first position); TaiESM1 (14 th position); and INM.CM5 (28 th position).	16

Figure 7: Error in the coefficient of variation (CVeror) at a 0.25° for (a) raw GCMs and (b) statistically downscaled GCM output using the MBCn method. Results are displayed for three models sorted by their position in the raw GCM ranking: EC.Earth3 (first position); TaiESM1 (14 th position); and INM.CM5 (28 th position).....	17
Figure 8: Difference of historical annual trends ($\Delta\tau$) at a 0.25° for (a) raw GCMs and (b) statistically downscaled GCM output using the MBCn method. Results are displayed for three models sorted by their position in the raw GCM ranking: EC.Earth3 (first position); TaiESM1 (14 th position); and INM.CM5 (28 th position).....	18
Figure 9: Correlation of the intra-annual cycle (rcycle) at a 0.25° for (a) raw GCMs and (b) statistically downscaled GCM output using the MBCn method. Results are displayed for three models sorted by their position in the raw GCM ranking: EC.Earth3 (first position); TaiESM1 (14 th position); and INM.CM5 (28 th position).....	19
Figure S1: Overall ranking (first row) and ranking per metric (last four rows) calculated for maximum temperature, prior to downscaling process. Colors and numbers represent the position of the ranking for a given resolution, GCM and metric.	25
Figure S2: Overall ranking (first row) and ranking per metric (last four rows) calculated for minimum temperature, prior to downscaling process. Colors and numbers represent the position of the ranking for a given resolution, GCM and metric.	26
Figure S3: Overall ranking (first row) and ranking per metric (last four rows) calculated for maximum temperature, prior (Raw) and posterior to downscaling process (QDM and MBCn). Colors and numbers represent the position of the ranking for a given resolution, GCM and metric.....	27
Figure S4: Overall ranking (first row) and ranking per metric (last four rows) calculated for minimum temperature, prior (Raw) and posterior to downscaling process (QDM and MBCn). Colors and numbers represent the position of the ranking for a given resolution, GCM and metric.....	28
