

Table of content

1	Introduction	1
1.1	The Lyman Alpha Spectral Feature	2
1.1.1	Lyman Alpha Emission Studies	3
1.1.2	Lyman Alpha Absorption Studies	5
1.2	Lyman Alpha Tomography	6
1.3	This work	8
2	Data: LATIS and Tomographic Density	9
2.1	The Lyman Alpha Tomography IMACS Survey	9
2.2	Characterization of LATIS galaxy spectra	11
2.3	Tomographic Local Density Definition δf	12
2.4	Tomographic map reconstruction	13
3	Dependence of the Lyα Emission on Galaxy Properties	16
3.1	Sample selection	17
3.2	UV-luminosity (M_{UV}) and UV-slope (β) measurements from available photometry	18
3.3	P(EW) estimation and how it changes as a function of galaxy properties in different density bins.	20
3.3.1	Local density δf bins	21
3.3.2	P(EW) as a function of galaxy properties in different density bins.	22
4	Dependence of Lyα Emission on Environment	26
4.1	Equivalent Width (EW) measurement from galaxy spectra	27
4.2	How the EW distribution changes with local density	30
4.2.1	Expectation from Theory	35
5	Dependence of Lyα absorption on Environment	38
5.1	Sample selection	38
5.2	Ly α Absorption in LATIS Galaxies	39
5.2.1	Spectra Wavelength	39
5.2.2	Spectral Flux	39
5.2.3	Galaxy local density (δ_f)	40
5.3	How observed Ly α absorption changes with δ_f	41
5.4	Differential absorption observed on stacked galaxy spectra and how it changes with δ_f	43
5.4.1	Fitting differential absorption with Voigt profiles	43
