

Table of Content

1	Introduction	1
1.1	Motivation	1
1.2	Research hypothesis.....	3
1.3	Objectives	3
1.3.1	General objective	3
1.3.2	Specific objectives	3
1.4	Structure of the thesis	4
1.5	Scope of the thesis	4
2	Global context and state of the art	6
2.1	Introduction.....	6
2.2	Climate change	6
2.3	Renewable energies worldwide.....	7
2.3.1	Installed capacity.....	7
2.3.2	Renewable generation	8
2.3.3	Costs evolution	9
2.3.3.1	Operation and maintenance costs for solar PV	11
2.4	Chilean scenario.....	12
2.4.1	Installed capacity and generation of renewables.....	12
2.5	Solar PV plants	13
2.5.1	Components of solar PV plants	13
2.5.1.1	Generation system	15
2.5.1.2	Conversion system.....	16
2.5.1.3	Transmission system.....	16
2.5.1.4	Transformation system.....	16
2.5.1.5	Monitoring and communicating system.....	17
2.5.2	Topologies for PV plants	17
2.5.3	Failure modes of PV plants	19
2.5.3.1	Generation system failure modes.....	19
2.5.3.2	Conversion system failure modes.....	20
2.5.3.3	Transmisión system failure modes.....	22
2.5.3.4	Transformation system failure modes.....	23
2.5.3.5	Monitoring and communicating system failure modes.....	24
2.5.4	PV plants maintenance based on current best practices	24
2.5.4.1	Components of PV maintenance	25

2.6	Maintenance optimization	29
2.6.1	Model definition for maintenance optimization	29
2.6.2	System configuration and information.....	30
2.6.2.1	Economic dependence	31
2.6.2.2	Structural dependence	32
2.6.2.3	Stochastic dependence	32
2.6.3	Classification of maintenance policy optimization model	33
2.6.3.1	Certainty category	33
2.6.3.2	Risk category	34
2.6.3.3	Uncertainty category	36
2.6.4	Maintenance effectiveness	37
2.6.5	Maintenance policies	38
2.6.5.1	Single-unit systems policies	39
2.6.5.2	Multi-unit systems policies	40
2.6.6	Maintenance optimization criteria	41
2.7	Solar PV maintenance optimization.....	42
2.8	Discussion	45
3	Proposed methodology	47
3.1	Introduction.....	47
3.2	Presentation and definition of the methodology.....	47
3.3	Characterization of the PV system	50
3.3.1	System breakdown	50
3.4	Methodology breakdown.....	51
3.4.1	Monte Carlo Simulation	51
3.4.2	Work items	51
3.4.2.1	Random meteorological sampling	51
3.4.2.2	Degradation models	54
3.4.2.3	Key indicators and optimization criteria	71
3.4.3	Optimization problem definition.....	72
3.4.4	Optimization process	74
3.4.5	Model calibration	75
3.4.5.1	Calibration of health state curves.....	75
3.4.5.2	Calibration of maintenance costs.....	76
4	Case study	77
4.1	Introduction.....	77
4.2	Case study selection criteria.....	77
4.3	Diego de Almagro PV solar plant modeling.....	78

4.3.1	Health State curves.....	79
4.3.2	Prices and costs	80
4.3.2.1	Purchase Power Agreement.....	80
4.3.2.2	Inspection costs	81
4.3.2.3	Preventive maintenance costs.....	81
4.3.2.4	Corrective maintenance costs	81
4.4	Computational simulation	81
4.4.1	Simulation on a high-performance computer	81
4.4.1.1	National Laboratory for High Performance Computing (NLHPC).....	82
4.4.2	Genetic algorithm tuning.....	82
4.5	Results for the large-scale problem.....	83
4.5.1	Performance of the genetic algorithm.....	83
4.5.2	Overall results and costs analysis	85
4.5.2.1	Base case	85
4.5.2.2	Optimal maintenance plan	87
4.5.3	Analysis of the optimal maintenance plan.....	90
4.5.3.1	Particular cases of the supporting structures and the inverter.....	92
4.5.3.2	Transformer case	93
4.5.3.3	Analysis of the decision variables of the methodology.....	94
4.5.3.4	Optimal maintenance plan in time format.	103
5	Conclusions	107
5.1	Conclusions about costs.....	107
5.2	Conclusions about technical results.....	108
5.3	Future works	110
5.3.1	Improving code implementation	110
5.3.2	Adding technical operating constraints	111
5.3.3	Adding contractual constraints.....	111
5.3.4	Extend methodology to dynamic evaluation	111
5.3.5	Analysis of the PFC sensitivity, beta function, and probabilities associated with human error.....	112
	Bibliography	113
	Annexed A - Random meteorological sampling selection	127
	Annexed B - Failures modes modeled	131
	Annexed C - Case study topology	135
	Annexed D - Datasheets	136
