Table of Content

1 Introduction **1**
- 1.1 Data in public transport passenger behavior modeling . . . 1
- 1.2 Previous studies of public transport passenger behavior using SC data . . . 3
- 1.3 Analytical framework and research gaps for the analysis of passengers' route choice behavior using passive transport data . . . 6
- 1.4 Research Objective, Questions and Scope . . . 9
  - 1.4.1 Research objective . . . 9
  - 1.4.2 Research questions . . . 10
  - 1.4.3 Research scope . . . 11
  - 1.4.4 Basic definitions . . . 12
- 1.5 Research Contribution . . . 12
  - 1.5.1 Scientific contribution . . . 12
  - 1.5.2 Societal contribution . . . 14
- 1.6 Outline . . . 15

2 Unveiling route choice strategy heterogeneity from smart card data in a large-scale public transport network **16**
- 2.1 Introduction . . . 17
- 2.2 Problem description . . . 19
  - 2.2.1 Route Choice Strategy . . . 20
- 2.3 Data description and analysis . . . 22
  - 2.3.1 Common lines analysis . . . 23
- 2.4 Assessment of discrete choice modeling approaches . . . 27
  - 2.4.1 Consideration set construction . . . 27
  - 2.4.2 Route choice modeling . . . 28
  - 2.4.3 Consideration sets results . . . 31
  - 2.4.4 Model estimates . . . 32
- 2.5 Discussion . . . 35
  - 2.5.1 Travel time . . . 35
  - 2.5.2 Waiting time . . . 36
  - 2.5.3 Walking time . . . 36
  - 2.5.4 Transfer . . . 36
  - 2.5.5 Path Size Term . . . 37
  - 2.5.6 Membership model of the latent class model . . . 37
- 2.6 Conclusions . . . 38

3 Assessing feasible approaches for building the consideration set in public transport route choice modeling using smart card data 42
3.1 Introduction . . . 43
3.2 On The Theoretical support for feasible approaches to building the consideration set . . . 46
3.3 Case study: data sources and research methodology . . . 49
3.3.1 Route choice data from smart cards in Santiago, Chile . . . 49
3.3.2 Network representation . . . 50
3.3.3 Seven approaches for generating the consideration set . . . 50
3.3.4 Specification of route choice models . . . 52
3.3.5 Evaluation of methods . . . 53
3.4 Results . . . 53
3.4.1 Consideration set generation approaches . . . 53
3.4.2 Route choice models . . . 57
3.5 Discussion . . . 58
3.6 Conclusions . . . 62

4 Evaluating the role of experience in a route choice context using smart card data in a large-scale public transport network 64
4.1 Introduction . . . 65
4.2 Data description and analysis . . . 67
4.2.1 Data description . . . 67
4.2.2 Effect of the new Metro line on mobility within Santiago and passengers' behavior . . . 68
4.3 Model Specification, Estimation and Results . . . 72
4.3.1 Consideration set construction . . . 72
4.3.2 Route choice modeling . . . 73
4.3.3 Consideration set results . . . 76
4.3.4 Model estimates . . . 79
4.4 Conclusions . . . 85

5 The effect of economic incentives and cooperation messages on user participation in crowdsourced public transport technologies 87
5.1 Introduction . . . 88
5.2 Background information and method . . . 90
5.2.1 Background information . . . 90
5.2.2 Participants . . . 91
5.2.3 Experimental design and procedure . . . 91
5.2.4 Empirical strategy . . . 92
5.3 Results . . . 93
5.3.1 Participation rate . . . 93
5.3.2 Level of user contribution . . . 95
5.3.3 Effect over time . . . 98
5.4 Discussion and conclusions . . . 99
5.5 Appendices . . . 101
5.5.1 Notifications received by users on their phones . . . 101
5.5.2 Sample size . . . 102

5.5.3 Estimation of the effect of each experimental condition on participation rate using a linear probability model 104
5.5.4 Estimation of the effect of each experimental condition on the level of user contribution using different models and different analyses 105
5.5.5 Estimation of the effect of each experimental condition on the level of user contribution using a Zero-inflated negative binomial model . . . 107

6 Conclusions and future research **110**
6.1 Main findings 110
6.2 Recommendations for future research 115

Bibliography **116**
