

Table of content

1	Introduction	1
1.1	General background in optimal control	1
1.1.1	Pontryagin Maximum Principle and indirect shooting methods	2
1.1.2	Direct transcription approach	3
1.1.3	Hamilton-Jacobi-Bellman equation	4
1.1.4	Bocop toolbox	4
1.2	Dissertation Outline	6
I	Mining context and the Open Pit problem	8
2	The Open Pit problem	9
2.1	Integer programming formulation	9
2.2	Continuous framework	11
3	Analysis of optimality conditions for 2D and 3D Final Open Pit	14
3.1	Introduction	14
3.2	The 2D open pit problem	16
3.2.1	Statement of the problem	16
3.2.2	Standing Assumptions	17
3.2.3	Basics on state constrained optimal control	18
3.2.4	Optimality conditions for the 2D open pit problem	20
3.3	The 3D open pit problem	23

3.3.1	Statement of the problem	24
3.3.2	Standing Assumptions	24
3.3.3	Optimality conditions	25
3.4	Future work and final remarks	27
4	Numerical study of 2D and 3D Final and Sequential Open Pit	28
4.1	Introduction	28
4.2	Problem statement	29
4.2.1	Continuous formulation	29
4.2.2	Semi continuous formulation for SOP	31
4.3	Analysis and optimality conditions for FOP	35
4.3.1	Applying Pontryagin’s Maximum Principle	35
4.3.2	Inactive case: bang/singular control	37
4.3.3	Active state constraint case	38
4.3.4	Control structure summary	38
4.4	Numerical simulations	39
4.4.1	Numerical methods	39
4.4.2	Final open pit (2D): global and local optimization	40
4.4.3	Sequential Open Pit (2D and 3D): local optimization	43
4.5	Conclusions	45
4.6	Implementation details for the semi-continuous approach	45
4.7	Additional examples for the final open pit - continuous formulation	46
4.7.1	FOP with infinite capacity and constant slope	46
4.7.2	FOP with infinite capacity and variable slope	47
II	Problems inspired by Covid-19 peak reduction	51
5	Compartmental models	52

5.1	SIR model	52
5.2	A new compartmental model including vaccines	54
6	A Mayer formulation for peak minimization problems	59
6.1	Introduction	59
6.2	Problem and hypotheses	60
6.3	Formulations with constraint	61
6.4	Formulation without state constraints	64
6.5	Numerical illustrations	68
6.5.1	A particular class of dynamics	68
6.5.2	Application to an epidemiological model	71
6.6	Discussion and conclusions	77
7	A feedback strategy for peak minimization in SIR model	79
7.1	Introduction	79
7.2	Definitions and problem statement	80
7.3	The NSN feedback	81
7.4	Optimal strategy	82
7.5	Numerical illustrations and discussion	86
8	Conclusion and perspectives	90
	Bibliography	97
III	Annexes	98
A	Codes global optimization (BocopHJB)	99
A.1	1D FOP - continuous formulation	99
A.1.1	Problem definition	99
A.1.2	Objective	100

A.1.3	Dynamics	102
A.1.4	Constraints	103
A.1.5	Other functions	104
B	Codes local optimization (Bocop)	108
B.1	1D SOP - continuous formulation	108
B.1.1	Problem definition	108
B.1.2	Problem functions	109
B.2	1D SOP - semicontinuous formulation	113
B.2.1	Problem definition	113
B.2.2	Problem functions	114
B.3	Local optimization (bocop) for 2D SOP - semicontinuous formulation	119
B.3.1	Problem definition	119
B.3.2	Problem functions	122
