

Contents

1. Introduction	1
2. Preliminaries	8
2.1. Basic results and notation	8
2.1.1. Generalized differentiation	10
2.1.2. (Convex) Subdifferential	11
2.1.3. Variational convergence and Moreau envelope	14
2.2. Probability functions	17
2.2.1. (Generalized) Differentiability of probability functions	18
2.2.2. (Generalized) Concavity of probability functions	28
3. Inner Moreau envelope of probability functions	30
3.1. Inner scalarization	31
3.2. Variational convergence of φ_λ	33
3.3. Differentiability and gradient formula for φ_λ	36
3.4. Consistency in nonsmooth conic chance constrained optimization problems	44
3.5. Examples and applications	49
3.5.1. Nonsmooth inequality constraint	49
3.5.2. Joint Chance constraint	52
3.5.3. Semidefinite chance constraint	53
3.5.4. Probabilistic/Robust (Probest) Chance Constraint	55
4. Generalized differentiation of probability functions generated by set-valued mappings	57
4.1. Inner enlargement of probability function (4.1)	58
4.2. Lipschitz continuity of probability function (4.1)	61
5. Chebyshev sets: weak projection and nonconvexity estimates	69
5.1. Nonconvexity estimators	70
5.2. Weak projection and a partial positive answer to Klee's conjecture	72
5.3. Quantification of Klee's theorem	74
6. Conclusions and future work	77
