

Table of Content

1	Introduction	1
1.1	Motivation	1
1.2	Hypotheses	3
1.3	General Objective	3
1.4	Specific Objectives	3
1.5	Structure of the document	3
2	Background	4
2.1	Astronomical Background	4
2.1.1	The Big Data Era	5
2.1.2	Astronomical Glossary	6
2.1.3	Astronomical Objects of Interest	8
2.1.4	Importance of the Classification of Astronomical Objects	10
2.2	Machine Learning Background	11
2.2.1	Datasets	11
2.2.2	Classification	11
2.2.3	Convolutional Neural Networks	12
2.2.4	Generative Modeling	15
2.2.5	Generative Adversarial Networks	17
2.2.6	Conditional Generation	20
2.2.7	State of the art in GANs	23
2.2.8	Training difficulties: A not so fun game	26
2.2.9	Evaluation of GANs	26
2.2.10	Additional GAN techniques	30
2.2.11	Data Augmentation	30
3	Methodology	31
3.1	Datasets	31
3.2	Data pre-processing	32
3.3	The Proposed Framework	34
3.3.1	General Description	34
3.3.2	Data structure details	36
3.3.3	Classifier details	36
3.3.4	GAN details	36
3.3.5	Preliminary experiment: The u -GAN	39

3.3.6	Resampling block	40
3.3.7	Model selection: The \mathcal{G} -score	41
3.3.8	Baselines	43
3.3.9	Data Augmentation experiment: mixing generated and real data . . .	46
3.3.10	Details for performing multiple experiments	47
4	Results and Discussion	48
4.1	Results	48
4.1.1	Generated Samples	48
4.1.2	Classification	49
4.2	Discussion	53
4.2.1	Quality of generated samples	53
4.2.2	Classification results	55
4.2.3	Alternative to \mathcal{G} -score	56
5	Conclusions	58
5.1	Future Work	59
6	Bibliography	59
