

# Table of Content

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Motivation . . . . .	1
1.2	Fundamentals . . . . .	1
1.2.1	Heterodyne receivers . . . . .	2
1.2.2	Figures of merit . . . . .	2
1.2.3	Mixers technologies . . . . .	3
1.3	Description of the general problem . . . . .	6
1.3.1	Focal Plane Array . . . . .	6
1.3.2	Multiband heterodyne receivers . . . . .	6
1.3.3	General requirements . . . . .	8
1.4	Hypothesis . . . . .	9
1.5	Objectives . . . . .	9
1.5.1	General Objective . . . . .	9
1.5.2	Specific objectives . . . . .	10
1.6	Contributions . . . . .	10
1.7	Outline of this thesis . . . . .	10
<b>2</b>	<b>A Compact Sideband Separating Downconverter With Excellent Return Loss and Good Conversion Gain for the W Band</b>	<b>12</b>
2.1	Introduction . . . . .	12
2.2	Module Design and Construction . . . . .	13
2.2.1	Waveguide coupler and load . . . . .	16
2.2.2	Low noise amplifiers . . . . .	16
2.2.3	Mixers . . . . .	17
2.2.4	Wilkinson power divider and LO filter . . . . .	19
2.2.5	Simulations of the entire downconverter module . . . . .	20
2.2.6	Construction and assembly of the module . . . . .	22
2.3	Module Measurements . . . . .	23
2.3.1	Conversion gain and sideband rejection . . . . .	23
2.3.2	Return loss . . . . .	25
2.3.3	Noise figure . . . . .	27
2.4	Conclusion . . . . .	29

<b>3</b>	<b>A Mode-Suppressing Metasurface for Large-Width MMICs Suitable for Tightly-Packaged Millimeter and Submillimeter Heterodyne Receivers</b>	<b>30</b>
3.1	Introduction . . . . .	30
3.2	Metasurface Design and Integration into the W-Band Heterodyne Module . . . . .	31
3.2.1	Power Spectrum Measurements . . . . .	34
3.2.2	Noise Temperature Measurements . . . . .	35
3.3	Conclusion . . . . .	37
<b>4</b>	<b>A 90° Waveguide Hybrid for Ultra-Broadband Operation with Low Amplitude &amp; Phase Imbalances</b>	<b>38</b>
4.1	Introduction . . . . .	38
4.2	Justification of the Design . . . . .	39
4.3	Proposed Design and Simulations . . . . .	40
4.4	Implementation, Measurements and Discussion . . . . .	42
4.5	Conclusion . . . . .	44
<b>5</b>	<b>Development of a multiband heterodyne downconverter for the extended W band</b>	<b>45</b>
5.1	Introduction . . . . .	45
5.2	RF Frequency Diplexer . . . . .	47
5.2.1	Hybrid 1 . . . . .	47
5.2.2	Hybrid 2 . . . . .	47
5.2.3	Filters . . . . .	48
5.2.4	Diplexer Simulation . . . . .	49
5.2.5	Diplexer Characterization . . . . .	52
5.3	Looking into the future: Proposal of a proof-of-concept wideband downconverter . .	54
5.3.1	I/Q mixers . . . . .	54
5.3.2	LO distribution . . . . .	54
5.3.3	Additional Components . . . . .	55
5.3.4	Proposed design . . . . .	55
5.3.5	Simulations . . . . .	56
5.4	Conclusion . . . . .	58
<b>6</b>	<b>Conclusions</b>	<b>60</b>
6.1	General Conclusions . . . . .	60
6.2	Future Work . . . . .	61
	<b>Bibliography</b>	<b>62</b>
