

Table of Content

1. Introduction	1
1.1. Climate Change and Water	1
1.2. Water allocation in the world	3
1.3. Natural resource accounting system	6
1.4. National Context	7
1.5. Research Questions	11
1.6. Objectives	11
1.7. Thesis organization	11
2. Defining a water accounting system	13
2.1. Application of the natural resource accounting system to a national problem	13
2.2. Discussions	16
3. Assessing the water allocation in a basin: a vectorial indicator	18
3.1. Defining the ideal scenario	18
3.1.1. Ideal scenario for consumptive uses (IS^C)	18
3.1.1.1. Domestic	19
3.1.1.2. Agriculture	20
3.1.1.3. Mining	21
3.1.1.4. Livestock production	22
3.1.1.5. Environmental protection	23
3.1.2. Non-consumptive uses (IS^{NC})	23
3.1.2.1. Forest industry	24
3.1.2.2. Hydropower	25
3.1.2.3. Aquaculture	25
3.1.3. Pollution for both uses (IS^B)	25
3.2. Defining a vectorial water allocation indicator	26
3.3. Discussions	30
4. Water tenure analysis	33
4.1. Background: definition and importance of water tenure	33
4.2. Relation types of tenure arrangements	35
4.3. Relation between water tenure and the vectorial indicator	36
5. Case study: the Tolten river basin, Chile	37
5.1. Tolten river basin: defining an ideal scenario	37
5.1.1. Consumptive uses	38
5.1.1.1. Domestic	38

5.1.1.2.	Agriculture	39
5.1.1.3.	Mining industry	39
5.1.1.4.	Livestock production	39
5.1.1.5.	Environmental protection	40
5.1.2.	Non-consumptive uses	40
5.1.2.1.	Forest industry	40
5.1.2.2.	Hydropower	41
5.1.2.3.	Aquaculture	41
5.1.2.4.	Pollution for all uses	41
5.2.	Accounting system for the Tolten river	41
5.3.	Optimization problem: finding an equitable allocation	43
5.3.1.	Model	45
5.3.1.1.	Superstructure	45
5.3.1.2.	Sets	46
5.3.1.3.	Parameters	47
5.3.1.4.	Variables	48
5.3.1.5.	Constraints and mathematical expressions	49
5.3.1.6.	Objective function	50
5.3.2.	Results	50
5.3.3.	Future scenario	51
5.3.4.	Results	52
5.4.	Discussions	53
5.4.1.	Ideal scenario definition	53
5.4.2.	Current scenario	54
5.4.3.	Future scenario	55
6.	Conclusions	57
	Bibliography	59
	Annex A. Determination of ideal scenario for agriculture	67
	Annex B. Water tenure	69
B.1.	Water tenure arrangements	69
B.1.1.	Defined by formal law	69
B.1.2.	Not Defined by formal law	70
B.2.	Water tenure uses	70
B.3.	Advantages and disadvantages of water tenure	71
	Annex C. Study case: Rio Tolten basin	72
C.1.	Flow	72
C.2.	Population to supply	72
C.3.	Determination of Tolten river basin percentage demand	73
C.4.	Agriculture flow determination	73
C.5.	Mining industry	74
C.6.	Future scenario	75
	Annex D. Code	77
