

# TABLE OF CONTENT

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Motivation . . . . .	2
1.2	Problem Statement . . . . .	4
1.3	Hypothesis . . . . .	4
1.4	General Objective . . . . .	5
1.5	Specific Objectives . . . . .	5
1.6	Contributions . . . . .	5
1.7	Thesis Organization and Papers Published . . . . .	6
1.8	Other Publications . . . . .	8
<b>2</b>	<b>A VLC Channel Model for Underground Mining Environments with Scattering and Shadowing</b>	<b>10</b>
2.1	Introduction . . . . .	10
2.2	Related Work . . . . .	12
2.2.1	VLC Applications in Underground Mines . . . . .	12
2.2.2	Works Related to Underground Mining VLC Channel Models . . . . .	13
2.2.3	Scattering and Shadowing Models Applied to VLC Indoor Non-Mining Channels . . . . .	14
2.3	Reference VLC Channel Model Applied to Underground Mining . . . . .	16
2.3.1	Light Sources . . . . .	16
2.3.2	Light Detectors . . . . .	17

2.3.3	Visible Light Propagation Model . . . . .	17
2.4	Position Characterization of LEDs and PDs, and Non-Flat Walls Modeling . . . . .	19
2.4.1	Tilted and Rotated LEDs and PDs . . . . .	19
2.4.2	Non-Flat and Non-Regular Tunnel Walls . . . . .	21
2.5	Statistical Shadowing Model Caused by Random Obstructions . . . . .	23
2.5.1	Assumptions Considered to Model Shadowing Statistically . . . . .	24
2.5.2	Description of the Underground Mining Scenario with Optical Link Blocking . . . . .	24
2.5.3	Proposed Statistical Shadowing Model . . . . .	25
2.6	Statistical Scattering Model Produced by Dust Particles . . . . .	26
2.6.1	Scatterers Distribution Model Considerations . . . . .	27
2.6.2	Analysis of the Interaction between the Optical Link and Local Scatterers	28
2.6.3	Proposed Channel Model Considering the Effects of Scattering . . . . .	29
2.7	Results and Analysis . . . . .	30
2.7.1	Analysis of the Proposed Underground Mining Channel Impulse Response . . . . .	31
2.7.2	Comparative Analysis between the Reference and Proposed Underground Mining Channel Impulse Responses . . . . .	37
2.7.3	Temporal Dispersion Analysis of the Proposed Underground Mining Channel . . . . .	39
2.7.4	Analysis of the Received Power in the Evaluated Underground Mining Scenario . . . . .	40
2.8	Conclusion . . . . .	43
2.9	Acknowledgements . . . . .	44
<b>3</b>	<b>Bit Error Probability of VLC Systems in Underground Mining Channels with Imperfect CSI</b>	<b>45</b>
3.1	Introduction . . . . .	45
3.2	System Model . . . . .	47

3.2.1	Mathematical Model of the UM-VLC Channel Gain . . . . .	47
3.2.2	PDF Derivation of the UM-VLC Square-Channel Gain . . . . .	49
3.2.3	Channel Estimation by the Least Squares Method . . . . .	52
3.2.4	BEP Expression for Perfect CSI . . . . .	53
3.2.5	BEP Expression for Imperfect CSI . . . . .	53
3.3	Numerical Results and Discussion . . . . .	54
3.4	Conclusion . . . . .	57
3.5	Acknowledgements . . . . .	58
<b>4</b>	<b>An Enhanced VLC Channel Model for Underground Mining Environments Considering a 3D Dust Particle Distribution Model</b>	<b>59</b>
4.1	Introduction . . . . .	60
4.1.1	Works Related to General Scatterer Distribution Models . . . . .	61
4.1.2	Scatterer Distribution Models Applied to Optical Communication Systems . . . . .	62
4.2	Underground Mining VLC System Model . . . . .	63
4.3	Analysis of the Scattering Phenomenon in Underground Mines and Distribution of Dust Particles . . . . .	64
4.3.1	Atmospheric and Dust Particles Scattering and Absorption Parameters in UM . . . . .	64
4.3.2	Analysis of the Interaction of Incident Light with Suspended Dust Particles . . . . .	66
4.3.3	The 3D Dust Particles Distribution Model . . . . .	67
4.3.4	Joint Distribution of the Arrival Time and the Arrival Angle of the Scattering Downlink Link . . . . .	68
4.3.5	UM-VLC Channel Component Produced by Scattering . . . . .	70
4.4	Results and Discussions . . . . .	71
4.4.1	Channel Impulse Response . . . . .	73
4.4.2	Received Power . . . . .	75

4.4.3	Signal to Noise Ratio . . . . .	78
4.4.4	Delay Spread . . . . .	78
4.4.5	Bit Error Rate . . . . .	81
4.5	Conclusions . . . . .	82
4.6	Acknowledgements . . . . .	83
<b>5</b>	<b>A Novel and Adaptive Angle Diversity-based Receiver for 6G Underground Mining VLC Systems</b>	<b>84</b>
5.1	Introduction . . . . .	84
5.1.1	Works Related to Receiver Orientation Algorithms and Methods . . .	86
5.2	VLC System Model Applied to Underground Mining Environments . . . .	88
5.2.1	Optical Transmitters and Receivers . . . . .	88
5.2.2	Channel DC Gain . . . . .	89
5.2.3	Receiver Optical Power . . . . .	92
5.3	Adaptive Orientation Receiver . . . . .	92
5.3.1	Adaptive Orientation Receiver Structure . . . . .	92
5.3.2	Adaptive Receptor Orientation Scenario . . . . .	93
5.3.3	Methodology Used to Estimate the Angle of Incidence . . . . .	95
5.4	Results and Discussion . . . . .	96
5.4.1	Distribution of the Received Power . . . . .	98
5.4.2	Distribution of the User Data Rate . . . . .	98
5.4.3	Bit Error Rate . . . . .	98
5.5	Conclusions . . . . .	102
5.6	Acknowledgements . . . . .	102
<b>6</b>	<b>Conclusions</b>	<b>104</b>
6.1	General Conclusions . . . . .	104
6.2	Future Work . . . . .	105
