

Table of Content

1. Introduction	1
1.1. SMBH and galaxy host growth	2
1.2. Mergers	4
1.3. This thesis	6
2. ALMA observations and data reduction	9
2.1. Campaign background	9
2.2. ALMA observations	10
2.3. Data reduction	11
2.4. Source detection	12
2.4.1. [CII] emission	12
2.4.2. Continuum emission	13
2.5. Continuum and spectral measurements	15
2.6. Calibration Issues	18
3. [CII] line and dust emission properties	19
3.1. [CII] line properties	19
3.1.1. [CII] velocity offsets	24
3.1.2. [CII] moments	25
3.2. Dust emission properties	27
3.2.1. SED and SFRs	27
3.3. $L_{\text{CII}}/L_{\text{FIR}}$ versus L_{FIR}	29

4. Dynamical, dust and gas masses	34
4.1. Dynamical masses M_{dyn}	34
4.2. Dust masses M_{dust}	35
4.3. Gas masses M_{gas}	36
4.4. Schmidt-Kennicutt relation	38
4.5. Main sequence of galaxies	39
5. Discussion	42
6. Conclusion	46
Bibliography	48
ANNEXES	
Annex A. Cycle 4 calibration issues	56
Annex B. Comparison of fluxes between Cycle 4 and 6	57
