

Table of Content

Introduction	1
1. Preliminaries	4
1.1. Basic Definitions and Properties	4
1.1.1. Topological Dynamical Systems	4
1.1.2. Measurable Dynamical Systems	8
1.2. Nilsystems	9
1.2.1. Nilmanifolds	9
1.2.2. Nilsystems and Properties	11
1.3. \mathbb{Z}^d -Dynamical Cubes	13
2. Recurrence for General Group Actions	16
2.1. Recurrence in Topological Dynamical Systems	16
2.2. Bohr Recurrence	19
2.2.1. Duality in locally compact abelian groups	19
2.2.2. Bohr Almost Periodicity	23
2.2.3. \mathbb{Z}^d -Bohr Recurrence	25
3. Katznelson's Question	32
3.1. Katznelson Question and Equivalences	32
3.2. Strategies for a Positive Answer	33
3.3. Bohr Recurrence in Inverse Limits and Proximal Extension	35
4. Bohr Recurrence in \mathbb{Z}^d-Nilsystems	38
4.1. Preliminaries	38
4.1.1. Connectedness in Nilsystems	38
4.1.2. Generalization Difficulties	45
4.2. Bohr Recurrence and the Strong Closing Property	50
4.2.1. Bohr Recurrence and Products of Return Times	50
4.2.2. The Strong Closing Property.	53
4.3. Bohr Recurrence in Affine Nilsystems	58
4.3.1. The Notion of Bohr Correlations	58
4.3.2. The Property of Complete Independence	63
5. Conclusions and Open Questions	74
Bibliography	76

Table of Figures

0.1.	PI Chain of Factors.	2
0.2.	Nilsystems' Chain of Factors.	2
3.1.	\mathbb{Z} -PI Chain of Factors Colored.	34
3.2.	\mathbb{Z} -Nilsystems' Chain of Factors Colored.	35
