

# Table of content

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Motivation . . . . .	1
1.2	Hypothesis . . . . .	6
1.3	Objectives . . . . .	6
1.3.1	General objectives . . . . .	6
1.3.2	Specific objectives . . . . .	6
1.4	Contributions . . . . .	6
<b>2</b>	<b>State of the art</b>	<b>8</b>
2.1	Satellite navigation . . . . .	8
2.1.1	Global Positioning System (GPS) . . . . .	8
2.1.2	GLONASS . . . . .	10
2.1.3	BeiDou . . . . .	10
2.1.4	Galileo . . . . .	10
2.1.5	Challenges for space-borne GNSS receivers . . . . .	11
2.2	Orbit propagation . . . . .	12
2.2.1	Orbital elements . . . . .	12
2.2.2	Simplified General Perturbations-4 model (SGP4) . . . . .	12
2.2.3	Two Line Element set (TLE) . . . . .	12
2.3	Range-based and angle-based localization methods . . . . .	13
2.3.1	Time Difference Of Arrival (TDOA) . . . . .	13
2.3.2	Angle Of Arrival (AOA) . . . . .	15
2.3.3	A combination of AOA with TDOA . . . . .	17
2.4	Position localization beyond the Earth . . . . .	18
2.4.1	X-ray Pulsar Navigation (XNAV) . . . . .	19
2.4.2	Star trackers used in position estimation . . . . .	19
<b>3</b>	<b>Theoretical framework</b>	<b>21</b>
3.1	Coordinate systems . . . . .	21
3.2	Initial position estimation . . . . .	23
3.3	Hill-Clohessy-Wiltshire dynamic model . . . . .	24
3.3.1	Full nonlinear dynamic model . . . . .	25
3.3.2	First-order dynamic model . . . . .	25
3.3.3	Second-order dynamic model . . . . .	25
3.3.4	Third-order dynamic model . . . . .	26
3.4	Characteristics and classification of a localization system . . . . .	26

3.5	Quality parameters . . . . .	27
<b>4</b>	<b>Methodology</b>	<b>29</b>
4.1	Tools and equations . . . . .	29
4.2	Attitude Determination and Control System (ADCS) . . . . .	32
4.3	Satellite reprogramming . . . . .	35
<b>5</b>	<b>Simulation results</b>	<b>37</b>
5.1	Localizing a femto-satellite with TDOA and AOA . . . . .	37
5.2	Improving the position estimation . . . . .	43
<b>6</b>	<b>Conclusions</b>	<b>49</b>
	<b>Bibliography</b>	<b>52</b>
	<b>Annex: Extended abstract</b>	<b>61</b>
