List of Tables	vii
List of Figures	viii
1 Introduction	1
1.1 Motivation and background	1
1.2 Hypotheses	2
1.3 Objective and methodology	2
1.3.1 Methodology	3
1.4 Thesis structure	3
2 State of the art	5
2.1 Types of magnetic sensors and space applications	5
2.1.1 Search Coil Magnetometer	6
2.1.2 Fluxgate Magnetometer	7
2.1.3 Magneto-resistive Magnetometer	9
2.2 Magnetometer from Imperial College	12
2.3 Magnetic Pulsations	13
2.3.1 Magnetic fields with axial symmetry: dipole case	14
2.3.2 Modes of propagation	16
2.3.3 PC5 waves	18
3 MAG-SPEL Design	20
3.1 Stage analysis	22
3.1.1 HMC1001	22
3.1.2 Offset compensation and gain stage	22
3.1.3 Demodulation	25
3.1.4 Integration and feedback	28
3.1.5 Current pulse generator	29
3.2 Components selection	31
4 Results and discussion	33
4.1 Implementation	33
4.2 Testing	35
4.3 Final results	38
5 Conclusion	43

5.1	Future work	44
	Bibliography	45
6	Appendix A: MHD development	50
6.1	Basic MHD Equations	50
6.1.1	Mass Continuity Equation	51
6.1.2	Momentum equation	51
6.1.3	Generalized ohm law	53
6.1.4	Final set of equations	53
6.2	MHD waves	54
6.2.1	Transverse Mode: Alfvén Mode	56
6.2.2	Fast and slow magnetosonic modes	58
7	Appendix B: PC5 Drivers	59
7.1	Upstream Waves	59
7.2	Kevin-Kelmholtz Instability (KHI)	60
7.3	Internal Amplifications	61
7.3.1	Field Line Resonance	61

List of Tables

2.1	AIGA Classification for different types of magnetic pulsations	14
2.2	Magnetic pulsations characteristics	15
3.1	Comparative values for two different OPAMPs to be selected for MAG-SPEL	31
3.2	Noise and input characteristic of selected OPAMPs.	32
4.1	Instrument Sensitivity	40
4.2	Final parameters of the SUCHAI 2/3 magnetometer MAG-SPEL	41

List of Figures

2.1	Reference table for magnetometers range	5
2.2	Search Coil Magnetometer (taken from [1])	7
2.3	Parallel Fluxgate Magnetometer (taken from [2])	8
2.4	Types of Fluxgates (taken from [3])	9
2.5	Current and magnetization on a thin-film strip (taken from [4])	10
2.6	Wheatstone bridge topology of the sensor and magnetization directions	12
2.7	Barber poles in the sensor construction	12
2.8	MAGIC circuit to be replicated	13
2.9	Example of toroidal mode on an Earth like object	16
2.10	Example of poloidal mode on an Earth like object	17
2.11	Example of all three modes on an Earth like object	17
2.12	L/LMT occurrence distribution of compressional PC5 waves	19
2.13	L/LMT occurrence distribution of toroidal PC5 waves	19
3.1	MAG-SPEL design	21
3.2	HMC1001 Wheatstone Bridge abstraction	22
3.3	MAG-SPEL Offset/amplification initial stage design	23
3.4	MAG-SPEL Offset/amplification final stage design	24
3.5	AC SPICE simulation for the Offset/amplification stage	24
3.6	Example of the offset/amplification stage output signal	25
3.7	MAG-SPEL Demodulation initial stage design	25
3.8	Output signal of the demodulation stage, theoretical and simulated	26
3.9	Error related to the demodulation stage	27
3.10	Percentage of the error relative to the theoretical signal	27
3.11	MAG-SPEL demodulation final stage design	28
3.12	MAG-SPEL sensor head with current pulse generator	29
3.13	SPICE simulation showing the bipolar current pulses	30
3.14	Enhanced pulse generated by the previous simulation	30
3.15	Different OPAMP noise density spectrum for the SUCHAI 2/3 component selection	31
4.1	PCB CAD for the sensor head of MAG-SPEL	34
4.2	Constructed PCB for the sensor head of MAG-SPEL	34
4.3	PCB CAD for the signal processing of MAG-SPEL	35
4.4	Constructed PCB for the signal processing of MAG-SPEL	35
4.5	Three axis Helmholtz Cage	36

4.6	Bartington three axis flux gate magnetometer	36
4.7	MAG-SPEL inside the Helmholtz Cage	37
4.8	Output voltage of MAG-SPEL for a given ambient magnetic field	38
4.9	Bipolar current pulses obtain from MAG-SPEL testing	39
4.10	Enhanced version of the current pulses from MAG-SPEL	39
4.11	Final data relation between ambient magnetic field and output voltage	40
6.1	Coordinates for analyzing waves in MHD	56
6.2	Phase velocity charts for analyzing waves in MHD	57
6.3	Eigenvectors for the case of Alfvén mode	57
6.4	Mode propagation analogy for the Alfvén case	58
6.5	Eigenvectors for each mode of propagation	58
7.1	Generation by upstream waves and penetration of pulsations.	60
7.2	Generation by KHI and penetration of pulsations.	61
7.3	FLR schematic demonstration	62
