

## Diterpenes and umbelliferone derivatives from *Haplopappus deserticola*

Zdero, C.

Bohlmann, F.

Niemeyer, H. M.

The aerial parts of *Haplopappus deserticola* afforded three ent-labdane and one labdane derivative as well as a nor-ent-labdane. Furthermore, in addition to three known umbelliferone derivatives, a dimeric coumarin was isolated. The structures were elucidated by high field  $^1\text{H}$  NMR spectroscopy.
