Maes, Louis

Christen, Philippe

Two new hygroline and tropane alkaloids, 4-hydroxybenzenepropanoylhygroline (1) and 3,4-dihydroxy-6-angeloyoxytropine (2) have been isolated from the aerial parts of *Schizanthus hookeri* and *S. tricolor*, respectively, two plants indigenous from Chile. Their structures were elucidated by spectroscopic methods and high resolution mass spectrometry. Their antiparasitic activity and cytotoxicity were measured.
