In the column head of Table 1, the unit for N_a should be mg/kg and not kg/ha.

Table 1 Structural characteristics and soil variables of lowland successional stands in Chiloé Island. BA Basal area of living trees, CWD coarse woody debris, N_a soil content of available N, N_{min} field rates of net N mineralization, ARA potential acetylene reduction activity, %W soil moisture content

^aBA (from Aravena et al. 2002) and biomass of CWD (from Carmona et al. 2002) for each stand

^bFor the first 10 cm of soil

^cFor 0–30 cm soil depth

^dEstimated for surface (0–10 cm) sieved mineral soil
