## I Introduction

<b>1 Exoplanets</b>	<b>4</b>
1.1 History . . . . .	4
1.2 Definition . . . . .	5
1.3 Direct imaging of exoplanets . . . . .	7
1.3.1 Angular resolution . . . . .	7
1.3.2 Contrast . . . . .	8
<b>2 Circumstellar disks</b>	<b>12</b>
2.1 Protoplanetary disks . . . . .	12
2.1.1 Disk formation in the context of star formation . . . . .	12
2.1.2 Protoplanetary disk properties . . . . .	15
2.1.3 Mechanisms at work in protoplanetary disks . . . . .	17
2.2 Debris disks . . . . .	20
2.3 Transition disks . . . . .	22
<b>3 Models of planet formation and evolution</b>	<b>24</b>
3.1 Gravitational instability . . . . .	24
3.2 Core accretion . . . . .	25
3.3 Predictions from planet formation models . . . . .	27
3.3.1 Hot and cold start models . . . . .	27
3.3.2 Circumplanetary disks . . . . .	28
3.3.3 Planet population synthesis . . . . .	29
3.4 Migration in a gas-rich disk . . . . .	30
3.4.1 Types of migration . . . . .	30
3.4.2 Eccentricity or inclination excitation in a gas-rich disk . . . . .	32
<b>4 Constraints on planet formation from direct imaging</b>	<b>34</b>
4.1 Constraints from direct imaging surveys . . . . .	34
4.2 Constraints from directly imaged young planetary-mass objects . . . . .	36
4.3 Protoplanet candidates . . . . .	39

<b>5 This thesis</b>	<b>42</b>
----------------------	-----------

<b>II Imaging of transition disks</b>	<b>45</b>
---------------------------------------	-----------

<b>6 Possible planet signposts in disk images</b>	<b>48</b>
6.1 Large gaps and cavities . . . . .	48
6.1.1 Observations . . . . .	48
6.1.2 Possible interpretations . . . . .	50
6.1.3 Concentric rings . . . . .	53
6.2 Asymmetric dust distributions . . . . .	53
6.2.1 Observations . . . . .	53
6.2.2 Possible origins . . . . .	55
6.2.3 Potential for second-generation planet formation . . . . .	57
6.3 Shadows and warps . . . . .	57
6.3.1 Shadows . . . . .	57
6.3.2 Warps . . . . .	59
6.4 Spiral arms . . . . .	60
6.4.1 Observations . . . . .	60
6.4.2 Possible origins . . . . .	62
6.4.3 Summary . . . . .	71
<b>7 Spiral arm characterization</b>	<b>74</b>
7.1 Morphology of shadow-induced spirals . . . . .	74
7.2 Analysis of the spirals of MWC 758 . . . . .	76
7.2.1 Identification of disk features in the IR images . . . . .	76
7.2.2 Reliability of the spiral arm detection . . . . .	78
7.2.3 Trace of the spirals . . . . .	79
7.2.4 Fits to the spiral density wave equation . . . . .	79
7.2.5 Proper motion . . . . .	82
7.2.6 Pitch angle . . . . .	83
7.2.7 Separation angles . . . . .	85
7.2.8 Origin of the spiral arms . . . . .	86
7.3 Case of HD 142527 . . . . .	89
7.3.1 The source . . . . .	89
7.3.2 <b>Spiral arms in the disk of HD 142527 from CO emission lines with ALMA</b> . . . . .	91
7.3.3 Characterization of dedicated simulated spirals . . . . .	99
<b>8 Transition disks within disk population studies</b>	<b>104</b>
8.1 Complete surveys of protoplanetary disks . . . . .	104
8.1.1 ODISEA . . . . .	106
<b>9 Summary and future plans</b>	<b>108</b>
9.1 Planet signposts in transition disks . . . . .	108
9.2 Origin of the observed spirals . . . . .	108
9.2.1 Case of MWC 758 . . . . .	109

9.2.2	Case of HD 142527 . . . . .	110
9.3	Future plans . . . . .	111
9.3.1	Origin of the large scale spirals of HD 142527 . . . . .	111
9.3.2	Spirals launched by companions on orbits non-coplanar with the disk	111

### **III High-contrast imaging of companions in thermal infrared**

**113**

<b>10 Overview of high-contrast imaging techniques</b>	<b>116</b>
10.1 Adaptive optics . . . . .	116
10.1.1 Performance of AO systems . . . . .	118
10.1.2 Speckles . . . . .	118
10.2 Coronagraphy . . . . .	119
10.2.1 The Annular Groove Phase Mask coronagraph . . . . .	120
10.3 Observing strategies . . . . .	122
10.3.1 Pupil-tracking . . . . .	122
10.3.2 Differential imaging . . . . .	123
10.4 Data reduction . . . . .	127
10.4.1 Basic treatment . . . . .	127
10.4.2 Post-processing . . . . .	128
10.4.3 VIP . . . . .	131
10.5 Performance assessment . . . . .	131
10.5.1 SNR and significance of detections . . . . .	131
10.5.2 Contrast curves . . . . .	132
<b>11 Survey of transition disks with VLT/NACO</b>	<b>134</b>
11.1 Motivation . . . . .	134
11.2 Targets . . . . .	135
11.3 Observations . . . . .	139
11.3.1 Strategies used for RDI observations . . . . .	140
11.4 Data calibration . . . . .	144
11.4.1 Systematic biases of NACO . . . . .	145
11.4.2 Sky subtraction . . . . .	147
11.4.3 Centering on the star . . . . .	148
11.4.4 Bad frames rejection . . . . .	152
11.5 Post-processing . . . . .	153
11.5.1 PCA . . . . .	153
11.5.2 Post-processing scheme . . . . .	154
11.6 Results . . . . .	156
11.6.1 Contrast curves of all ADI sources . . . . .	156
11.6.2 Contrast curves for RDI datasets . . . . .	158
11.6.3 HD 100453 . . . . .	159
11.6.4 T Cha . . . . .	160
11.6.5 WW Cha . . . . .	162
11.6.6 HD 135344 B . . . . .	162
11.6.7 J1622-3724 . . . . .	177

11.6.8	J1900-3645	179
11.6.9	HD 98800 B	181
<b>12</b>	<b>Contribution to the detection of companions in thermal IR</b>	<b>185</b>
12.1	Case of MWC 758	185
12.1.1	<b>Discovery of a point-like source and a third spiral arm in the transition disk around the Herbig Ae star MWC 758</b>	185
12.2	Case of HD 206893 B	201
12.2.1	Discovery	201
12.2.2	Spectral characterization	203
<b>13</b>	<b>Summary and future plans</b>	<b>206</b>
13.1	Summary of the results	206
13.2	Future plans	207
13.2.1	PCA-RDI contrast curves	207
13.2.2	Continuation of the survey	207
<b>IV</b>	<b>Detection and characterization of companions with an integral field spectrograph</b>	<b>209</b>
<b>14</b>	<b>Integral field spectroscopy</b>	<b>212</b>
14.1	VLT/SINFONI	214
<b>15</b>	<b>Mini-survey of transition disks with VLT/SINFONI</b>	<b>215</b>
15.1	Overview of the project	215
15.1.1	Sample selection	215
15.2	Observations	216
15.2.1	Specific observing strategies	218
15.3	Data reduction	220
15.3.1	Calibration	220
15.3.2	Post-processing	225
15.4	Results	227
15.4.1	HD 135344 B	227
15.4.2	HD 100546	234
15.4.3	HD 142527	236
15.4.4	HD 179218	237
15.5	Case of PDS 70	240
15.5.1	<b>A possible gap-crossing bridge linked to a companion candidate in the transition disk of PDS 70</b>	240
<b>16</b>	<b>Spectral characterization of companions with an IFS</b>	<b>251</b>
16.1	<b>Characterization of low-mass companion HD 142527 B</b>	<b>251</b>
16.1.1	Abstract	251
16.1.2	Introduction	252
16.1.3	VLT/SINFONI observations and data reduction	254
16.1.4	Results	254
16.1.5	Characterization of HD 142527 B	264

16.1.6	Discussion . . . . .	279
16.1.7	Summary . . . . .	281
16.1.8	Appendix A: Spectral classification of HD 142527 A . . . . .	283
16.1.9	Appendix B: Residual speckle uncertainty on the parameters of HD 142527 B . . . . .	284
<b>17</b>	<b>Summary and future plans</b>	<b>288</b>
17.1	Summary of the results on individual sources . . . . .	288
17.2	Strengths and weaknesses of each algorithm . . . . .	289
17.3	Future plans . . . . .	290
17.3.1	Cross-correlation technique . . . . .	290
17.3.2	Frame selection criterion for SDI . . . . .	291
17.3.3	Follow-up of HD 179218 . . . . .	291
17.3.4	Deeper analysis of PDS 70 . . . . .	291
<b>V</b>	<b>Conclusions and future perspectives</b>	<b>294</b>
<b>18</b>	<b>Main conclusions of this work</b>	<b>297</b>
18.1	Planet signposts and spiral arms in transition disks . . . . .	297
18.2	Thermal-IR high-contrast imaging of companions in young disks . . . . .	299
18.3	Detection and spectral characterization of companions in transition disks with an IFS . . . . .	300
<b>19</b>	<b>Future prospects</b>	<b>302</b>
19.1	Synergy of direct and indirect protoplanet detection methods . . . . .	302
19.1.1	Kinematics of the disk . . . . .	302
19.1.2	Global hydro-dynamical simulations of disks . . . . .	303
19.2	Future of high-contrast imaging . . . . .	303
19.2.1	Promising high-contrast imaging techniques . . . . .	303
19.2.2	Future high-contrast imaging instruments . . . . .	304
<b>List of acronyms and symbols</b>		<b>306</b>
<b>Bibliography</b>		<b>308</b>
