

# Celebrating Half a Century of Environment and Behavior: A Bibliometric Review

Milfont, Taciano L.

Amirbagheri, Keivan

Hermanns, Elena

Merigó, José M.

Environment and Behavior is a leading international journal that publishes research examining the relationships between human behavior and the built and natural environments since 1969.

Motivated by its half-century anniversary, the present article uses the Web of Science Core Collection database to provide a bibliometric overview of the leading trends that have occurred in the journal during the 1969-2018 period. The impact of the journal has increased over the years, Gary W. Evans is the author with most published papers, articles by Paul C. Stern and Thomas Dietz have made a notable scientific impact, the University of Michigan is the institution with the highest number of publications, and there is a growing trend in the number of women and international contributors to the journal. This bibliographic review provides strong evidence of the scientific impact of the journal, and the wider Environment-and-Behavior community should be proud of its story of success.
