Contents

I Introduction **1**

1 Introduction **2**
1.1 Preliminaries . . . 2
1.1.1 Dispersion and Decay . . . 3
1.2 Three Boussinesq Models . . . 4
1.2.1 Basic properties of the Improved Boussinesq model . . . 6
1.2.2 Basic properties of the (*abc*d)-Boussinesq system . . . 7
1.2.3 Basic properties of the Good-Boussinesq equation . . . 9
1.3 The Adkins-Nappi and Skyrme models . . . 10
1.4 The Virial Technique . . . 11
1.5 Results in this thesis . . . 12
1.5.1 Asymptotic dynamics of small solutions in Improved- Boussinesq . . . 12
1.5.2 Ill-posedness in *abc*d–Boussinesq model . . . 14
1.5.3 Asymptotic manifolds around the good-Boussinesq standing wave . . . 16
1.5.4 Decay in Skyrme and Adkin-Nappi field theories . . . 18
Bibliography . . . 21

II Boussinesq Models **26**

2 Decay in the one dimensional generalized Improved Boussinesq equation **27**
2.1 Introduction . . . 28
2.1.1 Setting . . . 28
2.1.2 Main results . . . 30
2.1.3 More about solitons . . . 32
2.2 Virial identities . . . 34
2.3 Decay in exterior light cones. Proof of Theorem 2.1 . . . 37
2.3.1 End of proof of Theorem 2.1 . . . 41
2.4 Decay in compact sets: Proof of Theorem 2.2 . . . 42
2.4.1 End of proof of Theorem 2.2 . . . 44
Bibliography . . . 46

3 Ill-posedness issues on (*abc*d)-Boussinesq system **49**
3.1 Introduction . . . 50
3.1.1 Setting . . . 50
3.1.2 Main results . . . 52

3.2 Preliminaries . . . 55
3.2.1 Bejenaru-Tao's abstract theory . . . 55
3.2.2 Equivalent representation of *abc*d systems . . . 56
3.3 Proof of Theorem 3.2 . . . 62
3.3.1 Generic regime: $a,\ c<0$ and $b,\ \mathrm{d}>0$ . . . 62
3.3.2 KdV-KdV regime: $b=\mathrm{d}=0$ and $a=c=\frac{1}{6}$ . . . 66
3.4 Proof of Theorem 3.3 . . . 67
3.4.1 Generic regime: $a,\ c<0$ and $b,\ \mathrm{d}>0$ . . . 67
3.4.2 KdV-KdV regime: $b=\mathrm{d}=0$ and $a=c=\frac{1}{6}$ . . . 70
3.4.3 BBM-BBM regime: $a=c=0$ and $b=\mathrm{d}=1/6$ . . . 71
Appendices . . . 73
3.A Local Well-Posedness . . . 73
3.A.1 Notations . . . 73
3.A.2 Littlewood-Paley Decomposition . . . 73
3.A.3 Bilinear estimates . . . 74
3.B Decomposition of (Q_1,Q_2) on the generic regime: one-dimensional case . . . 76
3.C Decomposition of (Q_1,Q_2,Q_3): generic case . . . 77
3.D Decomposition of (Q_1,Q_2,Q_3): $a=c$ and $b=\mathrm{d}\geqslant 0$ . . . 78
Bibliography . . . 80

4 Asymptotic stability manifolds for solitons in the generalized Good Boussinesq equation 83
4.1 Introduction . . . 84
4.1.1 Setting . . . 84
4.1.2 Standing waves . . . 86
4.1.3 Main results . . . 87
4.1.4 Idea of the proof . . . 89
4.2 A virial identity for the (gGB) system . . . 91
4.2.1 Decomposition of the solution in a vicinity of the soliton . . . 91
4.2.2 Notation for virial argument . . . 92
4.2.3 Virial estimate . . . 93
4.2.4 End of Proposition 4.3 . . . 99
4.3 Transformed problem and second virial estimates . . . 99
4.3.1 The transformed problem . . . 99
4.3.2 Virial functional for the transformed problem . . . 99
4.3.3 Proof of Proposition 4.8: first computations . . . 100
4.3.4 First technical estimates . . . 102
4.3.5 Controlling error and nonlinear terms . . . 106
4.3.6 End of proof of Proposition 4.8 . . . 108
4.4 Gain of derivatives via transfer estimates . . . 109
4.4.1 A virial estimate related to $\mathcal{M}(t)$ . . . 110
4.4.2 Second set of technical estimates . . . 111
4.4.3 Start of proof of Proposition 4.19 . . . 114
4.4.4 Controlling error terms . . . 116
4.4.5 Controlling nonlinear terms . . . 118
4.4.6 End of proof Proposition 4.19 . . . 119
4.5 A second transfer estimate . . . 120

4.5.1 A virial identity for $\mathcal{N}(t)$ . . . 120
4.5.2 Start of proof of Proposition 4.25 . . . 121
4.5.3 Control of nonlinear terms . . . 124
4.5.4 End of proof of Proposition 4.25 . . . 124
4.6 Proof of Theorem 4.1 . . . 125
4.6.1 Coercivity . . . 125
4.6.2 Proof of Theorem 4.1 . . . 129
4.7 Proof of Theorem 4.2 . . . 133
4.7.1 Conservation of Energy . . . 133
4.7.2 Construction of the graph . . . 134
4.7.3 Uniqueness and Lipschitz regularity . . . 136
Appendices . . . 140
4.A Linear spectral theory for $-\partial_x^2\mathcal{L}$ . . . 140
4.A.1 Asymptotic behavior of fundamental solutions of $-\partial_x^2\mathcal{L}(u) = 0$ . . . 144
4.B Proof of Claims 4.21 and 4.22 . . . 145
4.B.1 Relation between $\partial_x z_{\mathrm{i}}$ and $\partial_x v_{\mathrm{i}}$ . . . 145
4.B.2 Relation between $\partial_x^2 z_{\mathrm{i}}$ and $\partial_x^2 v_{\mathrm{i}}$ . . . 147
4.C Proof of Lemma 4.27 . . . 149
Bibliography . . . 150

III High Energy Models 153

5 On the decay problem for the Skyrme wave maps 154
5.1 Introduction . . . 155
5.1.1 Main results . . . 155
5.1.2 Idea of the proof . . . 158
5.2 Virial Identities . . . 158
5.2.1 Virial identities for the Skyrme Model . . . 159
5.2.2 Virial identities for the Adkins-Nappi Model . . . 164
5.3 Decay in exterior light cones for the Skyrme and Adkins-Nappi models . . . 167
5.3.1 Proof of Theorem 5.1: Skyrme and Adkins-Nappi equations . . . 169
5.4 Decay of weighted energies . . . 170
5.4.1 Growth rate for the modified energy in the Skyrme and Adkins-Nappi equations . . . 170
5.4.2 Decay to zero for modified Energies: Proof of the Theorem 5.2 . . . 171
5.4.3 End of proof of Theorem 5.2 . . . 181
Bibliography . . . 182

IV Conclusion 184

6 Conclusions and Perspectives 185
6.1 Conclusions . . . 185
6.2 Future Work . . . 186
6.2.1 Stability and Asymptotic Stability of Kinks in Wave-Cahn-Hilliard equation . . . 186

6.2.2 Asymptotic stability of even data perturbations of solitary waves in the (abcd)-Boussinesq system 187
6.2.3 Stability of the solitary wave in the Improved-Boussinesq equation . . 187
Bibliography 189
