

Table of Content

1. Introduction	1
1.1. Motivation	1
1.2. Objectives	2
1.2.1. Specific objectives	2
1.3. Scopes	2
2. Background	4
2.1. Weldment Distortions	4
2.1.1. Factors Affecting distortion	5
2.1.2. Types of distortions	5
2.2. Temperature	6
Maximum isotherm width	9
2.3. Residual stresses	10
2.3.1. Strain in thermal processes	11
2.3.2. Tendon force	15
2.4. Calculation of stresses and distortion in pipeline weld root pass	18
2.4.1. Components of residual stresses	20
2.4.2. Solution of distortions for a cylinder radially loaded at the end	23
2.5. Susceptibility index to assess the influence of joint fit-up on pipeline weld root discontinuities	25
2.5.1. Stress concentration factor due misalignment	27
3. Methodology	29
4. Results	31
4.1. Analytical proposed solution for radial displacements	31
4.2. Case study	33
4.2.1. Numerical simulation results	34
4.3. Effects of pipe distortions and misalignment on weld root residual stress	40
5. Discussions	41
5.1. Analytical solution for radial displacement in circumferential welds	41
5.2. Numerical simulation	42

5.3. Solutions for the stress in the pipe	43
5.4. Maximum strain on the weld root pass	43
5.4.1. Comments on the use of correction factors	44
6. Conclusions	45
Bibliography	47
Annexes	48
Annexed A. Tendon force, thin plate constant properties	48
Annexed B. Strain Energy minimization	50
Annexed C. Strain Energy minimization from proposed stress field	52
Annexed D. Script Rosenthal solutions calculator	54
Annexed E. Numerical Results for Displacements	56
Annexed F. Material characterization in numerical simulations	58
